Abstract ABSTRACT OF THE DISCLOSURE

~~The invention relates to an~~ An air supply device for a vehicle seat ~~with~~ has an air channel (20) arranged on the pressure side of a ~~blower (18), which~~ blower. The channel comprises at least one air discharge opening (24) provided in the upper region of the seat for supplying the head, shoulder and neck area of an occupant of the seat with an adjustable ~~airflow, a~~ airflow. A heating element (22) ~~being~~ is arranged in the air channel (20) between the blower (18) and the air discharge opening (24). In order to ~~produce an~~ provide the air supply device ~~for a vehicle seat, the~~ with an airflow of which feels more comfortable to the occupant of the seat, a grid element (32) is arranged inside the air channel between the air discharge opening (24) and the heating element (22). ~~By virtue of this, on the one hand~~ As a result, the airflow emerging from the air discharge opening (32) is homogenized and slowed down, and ~~on the other hand~~ this slowing-down allows more heat to be transferred to the airflow from the heating element (22).
